Response to Arguments

1. Applicant's arguments, see Pre-Appeal Brief filed on 3/16/2007, with respect to claims 1-32 have been fully considered and are persuasive. The rejections of Office Action 1/17/2007 have been withdrawn.

Allowable Subject Matter

2. The following is an examiner's statement of reasons for allowance: Claims 1-32 are allowable over prior art references because related references do not disclose an equalizer comprising: a first linear filter for filtering a block of received data according to first filter parameters to generate first-filtered data; a combiner for modifying the first-filtered data with second-filtered data to generate modified data; a decision device for generating modified tentative decisions on all data in the block based on the modified data, the modified tentative decisions being modified with respect to tentative decisions of a previous iteration, said modified tentative decisions being used to subtract out an estimate of the intersymbol interference; and a second linear filter for causally and anticausally filtering said block of tentative decisions from a previous pass according to second filter parameters to generate said second-filtered data so as to produce an estimate of the intersymbol interference; wherein said received block of data is filtered more than once by multiple non-simultaneous passes through the data, each pass comprising both a first filter and a second filter.
